IBM Bob Level 3

Demonstration Checklist for IBM Sales

IBM Sales: To complete this course, you are required to use **IBM Stand and Deliver** to create your client facing demonstration video using the environment and demo script provided in the **IBM Bob Level 3 learning plan.**

Tip: Use this checklist to ensure that your demo meets the criteria for approval. Managers and reviewers will be using this checklist during your Stand and Deliver to confirm that you have met the requirements.

Evaluating the Demonstration

IBM Sellers need to include each of the following elements in their Stand & Deliver recording to receive Level 3 accreditation. For any Stand & Deliver recording, you can choose your own fictional client/scenario; there's no fixed script. The key is to articulate the value of IBM Bob.

1. Seller articulated client's pain point(s) and the value proposition of using *IBM Bob.*

Grade	Criteria
5 (*top marks*)	Articulated a specific picture of the client's pain, quantified or evidenced the value of using IBM Bob, and made inaction feel clearly more expensive than change.
4	Clear articulation of a specific client pain point and showed the value proposition of using IBM Bob.
3	Specified pain point(s) and connected it loosely to an opportunity, but the link between the pain and the value proposition was thin with no case for urgency.
2	Pain point(s) and value proposition mentioned in general terms but not tied to a specific client or opportunity.
1	No client pain point(s) identified, and no value pitch delivered.

2. Seller highlighted use cases *for IBM Bob.*

Grade	Criteria
5 (*top marks*)	Went above and beyond. Tied IBM Bob and client's pain points to a robust use case.
4	Well done. Included a robust use case, showing the client the value of Bob.
3	Included at least one use case, but the role of IBM Bob was vague, and no unanticipated obstacles were raised.
2	Included at least use case, but not a deep level.
1	No use cases mentioned.

3. **AI Maturity Curve:** The seller chooses one of the four steps along the AI Maturity Curve — Assist, Delegate, Tailor, or Scale & Extend — to frame their recording pitch around. They use the theme as the basis for describing how *IBM Bob* benefits clients at this stage in their journey; reinforcing their own understanding by explaining to the audience all the hands-on steps & actions taken during their pick of the lab's modules. The seller has tailored the message further for a hypothetical client's business and how the client's business could benefit from IBM Bob at this stage in its AI Maturity Curve journey.

Grade	Criteria
5 (*top marks*)	Went above and beyond. At least one step along the AI Maturity Curve was mentioned, tying into both the client's current progression and outlining their next steps in progressing the AI Maturity Curve with IBM Bob.
4	Well done. At least one step along the AI Maturity Curve was chosen deliberately based on the client's journey and the benefits of IBM Bob are clearly aligned to that progression.
3	At least one step along the AI Maturity Curve was mentioned and tied to a client's own journey.
2	At least one stage of the journey was mentioned, but only in passing and never tied to client pain points or IBM Bob value.
1	No stages from the AI Maturity Curve journey were referenced.

4. Seller closed the demo with a **call to action** for the client that could include: a workshop, a deeper dive into the product meeting, Proof of Experience (PoX) engagements, and so on.

Grade	Criteria
5 (*top marks*)	Went above and beyond. Proposed a specific next step with owners, timing, and scope, tied it back to the client's stated pain, and actively secured commitment to it.
4	Well done. Closed with a clear, concrete next step for the client to act on.
3	Proposed a general next step rather than a specific ask the client could agree to on the spot.
2	Closed with a vague gesture toward following up, with no defined action, owner, or timeframe.
1	The presentation ended with no next step, leaving the client with nothing to act on.
